# CONTENTS

## UNIT - 1 : CONSTRUCTION & OPERATION OF SINGLE PHASE

<b>TRANSFORMERS .....</b>	<b>1.1 - 1.38</b>
1.1. Components of electrical energy .....	1.1
1.2. Characteristics of circuit elements .....	1.2
1.2.1. Resistance .....	1.2
1.2.2. Inductor .....	1.2
1.2.3. Capacitor .....	1.3
1.3. Transformation of Electrical energy .....	1.3
1.3.1. Conductively .....	1.3
1.3.2. Mechanically .....	1.3
1.3.3. Inductively .....	1.4
1.4. Construction of Transformer (T/F) .....	1.4
1.4.1. Working Principle of a T/F .....	1.5
1.4.2. Relation between direction of current and lines of force .....	1.5
1.4.3. Right hand thumb rule .....	1.5
1.4.4. Left hand thumb rule .....	1.5
1.5. Different fluxes produce in a transformer .....	1.6
1.5.1. Leakage flux of primary $\phi_{L_1}$ or Leakage reactance "X1" .....	1.6
1.5.2. Leakage flux of secondary $\phi_{L_2}$ and Secondary leakage reactance "X2" .....	1.7
1.5.3. Properties of leakage flux .....	1.7
1.5.4. Disturbance or harmonic flux .....	1.8
1.5.5. Elimination of 3rd harmonic .....	1.8
1.5.6. Electromagnetic forces in transformers - Effects .....	1.9
1.6. Classification of Transformers (T/F) .....	1.10
1.7. Transformer core – analysis .....	1.11
1.7.1. Laminations of Core .....	1.11
1.7.2. Cross section of core .....	1.11
1.7.3. Spiral core .....	1.12
1.7.4. Advantages of CRGO .....	1.12
1.7.5. Humming Sound in T/F .....	1.12
1.7.6. Magnetostriction .....	1.12
1.7.7. Steinmetz constants of core materials .....	1.12
1.7.8. Thickness of laminations .....	1.13
1.7.9. Stack factor .....	1.13

1.8.	TRANSFORMER WINDINGS .....	1.13
1.8.1.	Concentric windings.....	1.13
1.8.2.	Spiral windings .....	1.14
1.8.3.	Helical winding.....	1.14
1.8.4.	Cross-over windings.....	1.14
1.8.5.	Continuous disc winding .....	1.15
1.8.6.	Sand witched windings .....	1.15
1.9.	Characteristics of transformer oil.....	1.16
1.9.1.	Properties of Transformer oil.....	1.16
1.9.2.	Different transformer oils .....	1.16
1.10.	Choice of flux density .....	1.16
1.10.1.	Advantages of high flux density .....	1.16
1.10.2.	Disadvantages of high flux density.....	1.16
1.10.3.	Flux density in different transformers.....	1.16
1.10.4.	CTC = continuously transposed conductors .....	1.17
1.10.5.	Sludge .....	1.17
1.10.6.	Different windings used in core type transformers.....	1.17
1.11.	Types of transformers based on construction .....	1.18
1.11.1.	Core-Type transformer .....	1.18
1.11.2.	Shell-type T/F.....	1.18
1.11.3.	Berry type .....	1.19
1.11.4.	Comparison between core and shell type transformers .....	1.19
1.12.	Electrical & Magnetic characteristics of T/F .....	1.19
1.13.	EMF equation of a Transformer .....	1.21
1.14.	Transformation ratio of transformer "K" .....	1.21
	Worked Examples .....	1.22
1.15.	Action of practical T/F on no-load .....	1.23
1.16.	Action of a transformer on-load.....	1.27
1.17.	Vector diagram of T/F at different p.f. loads.....	1.28
1.18.	Equivalent Circuit of a Transformer.....	1.29
1.18.1.	Equivalent circuit of [a T/F on No-load] Transformer core .....	1.29
1.18.2.	Exciting component, of the core.....	1.29
1.18.3.	Loss component of the core .....	1.30
1.18.4.	Equivalent circuit of primary .....	1.30
1.18.5.	Equivalent circuit of secondary .....	1.31
1.18.6.	Equivalent circuit of a transformer.....	1.31

1.19.	Vector diagrams of practical T/F at different p.f. loads.....	1.32
1.19.1.	Step-by-step procedure.....	1.32
1.19.2.	Vector diagram of lagging p.f.....	1.32
1.19.3.	Unity p.f. load.....	1.33
1.19.4.	Leading p.f. load.....	1.33
1.20.	Transfer of resistance and reactance between primary and secondary winding.....	1.33
1.20.1.	Case-1: Transferring secondary R <sub>2</sub> and X <sub>2</sub> to primary side.....	1.33
1.20.2.	Equivalent diagram of T/F. referred to primary.....	1.34
1.20.3.	Equivalent diagram of T/F referred to secondary.....	1.35

**UNIT - 2 : TESTING & PERFORMANCE OF SINGLE PHASE**

**TRANSFORMERS..... 2.1 - 2.33**

2.1.	Calculation of parameters of transformer.....	2.1
2.2.	Open Circuit Test of a transformer.....	2.1
2.3.	Separation of Eddy and Hy. losses from iron losses.....	2.3
2.4.	Short-circuit or impedance test.....	2.6
2.5.	Reasons for conducting S.C. test on H.V. side.....	2.7
2.6.	Relation between copper losses and T/F rating (KVA).....	2.8
2.7.	Capacity of transformer and rotating machines.....	2.9
2.7.1.	Capacity of a transformer.....	2.9
2.7.2.	Capacity of rotating machines.....	2.9
2.8.	Losses and efficiency of a transformer.....	2.9
2.8.1.	Electrical losses.....	2.9
2.8.2.	Magnetic losses.....	2.10
2.9.	Condition for maximum efficiency.....	2.11
2.10.	Performance characteristics of T/F.....	2.12
2.11.	Regulation of a transformer.....	2.15
2.11.1.	Calculation of voltage drop in a transformer.....	2.16
2.11.2.	Lagging p.f.....	2.17
2.11.3.	Unity p.f.....	2.17
2.11.4.	Leading p.f.....	2.17
2.11.5.	Actual voltage regulation.....	2.17
2.11.6.	Important note.....	2.18
2.11.7.	Condition for zero regulation.....	2.18
2.11.8.	Condition for max. Regulation.....	2.18

2.12.	KAPP regulation diagram.....	2.19
2.13.	Sumpner's or back-to-back test .....	2.20
2.14.	Efficiency – Types :- These are two types .....	2.29
2.14.1.	Power efficiency (or) efficiency (or) commercial efficiency .....	2.29
2.14.2.	Energy efficiency or All-day efficiency .....	2.29
2.15.	Percentage resistance, reactance and impedance .....	2.31
2.15.1.	Percentage resistance .....	2.31
2.15.2.	Percentage reactance .....	2.32
2.15.3.	Percentage Impedance .....	2.32
2.15.4.	Calculating resistance & reactance from percentage values .....	2.32

### UNIT - 3 : PARALLEL OPERATION OF TRANSFORMERS &

<b>AUTO TRANSFORMERS .....</b>	<b>3.1 - 3.34</b>	
3.1	Per unit (PU) system.....	3.1
3.1.1.	Advantages of P.U. System .....	3.1
3.1.2.	Application of P.U. system.....	3.2
3.2.	Parallel operation of single-phase transformers .....	3.6
3.2.1.	Advantages .....	3.6
3.2.2.	Conditions required for parallel operation .....	3.7
3.2.3.	Same voltage ratings.....	3.7
3.2.4.	The frequency rating of T/F = Supply frequency.....	3.7
3.2.5.	Same polarity or phase sequency.....	3.8
3.2.6.	Same transformation ratio i.e $K_1 = K_2$ .....	3.8
3.2.7.	Same $\frac{X}{R}$ ratio .....	3.8
3.2.8.	Same type .....	3.8
3.3.	Ideal single phase transformers in parallel .....	3.9
3.4.	Practical transformers in parallel ( $E_1 = E_2 = E$ ).....	3.10
3.4.1.	Unequal voltage transformers in parallel [ $E_A \neq E_B$ ] .....	3.13
3.5	Auto – Transformers.....	3.15
3.6	Auto-transformers (or) single winding T-F .....	3.16
3.7.	Study of step-down auto-transformer .....	3.17
3.8.	Saving of copper between double wound T/F and auto T/F.....	3.17
3.9.	Relation between inductive, conductive & input powers .....	3.18
3.10.	Study of step-up auto transformer.....	3.18
3.11.	Applications of auto transformer .....	3.19
3.12.	Disadvantages of auto-transformers.....	3.19

3.13.	Auto transformer as variac or Dimmerstat .....	3.19
3.14.	Double-Wound Transformer as an Auto-Transformer .....	3.21
3.15	<b>Objective Type Questions – 1</b> .....	3.25

**UNIT - 4 : POLY PHASE TRANSFORMERS..... 4.1 - 4.20**

4.1.	Three-phase transformers .....	4.1
4.2.	Transmission of 3 $\phi$ power by 3-single phase transformer .....	4.2
4.3.	Advantages of 3 $\phi$ transformers .....	4.3
4.4.	Disadvantages of 3 $\phi$ transformers .....	4.3
4.5.	Advantages of 3-single phase transformers.....	4.3
4.6.	Different types of 3 $\phi$ T/F based on connections.....	4.4
4.7.	Study of different types of transformers Star/star transformer. ....	4.4
	4.7.1. Delta / Delta transformer .....	4.5
	4.7.2. Delta/Star .....	4.5
	4.7.3. Star/Delta .....	4.6
4.8.	Flux distribution in core-type transformer.....	4.6
4.9.	Flux distribution in shell-type T/F .....	4.7
4.10.	Comparison of core saving between shell type and core type ...	4.8
4.11.	Open Delta (or) V-V connection .....	4.13
4.12.	Parallel operation of 3 – phase transformers .....	4.15
	4.12.1. Conditions required for parallel operation.....	4.15
	4.12.2. Points to be observed while dealing with parallel operation .....	4.15
4.13.	TAP changing or Voltage control of transformers .....	4.16
4.14.	Classification of tap-changers .....	4.17
	4.14.1. OFF-load tap-changers .....	4.17
	4.14.2. ON-load tap-changers .....	4.17
	4.14.3. Secondary having two windings .....	4.17
	4.14.4. Tap. Changing with centre tapped reactor.....	4.18
	4.14.5. Tap-changing through resistive shunts .....	4.19

**UNIT - 5 : SPECIAL TYPE OF TRANSFORMERS AND COOLING.. 5.1 - 5.88**

5.1.	Scott connected or T-T connected transformers .....	5.1
	5.1.1. Case -1 : Three phase to two-phase .....	5.2
	5.1.2. Two phase (900) to 3-phase (1200).....	5.3
	5.1.3. Vector diagram of scott-connected T/F on load. [3 $\phi$ - 2 $\phi$ ] .....	5.4
	5.1.4. Application of Scott connected transformer .....	5.7
	5.1.5. Comparison between V-V and T-T connections .....	5.9

5.2.	Instrument Transformers.....	5.9
5.2.1.	Potential transformer P.T. ....	5.10
5.2.2.	Current transformer (C.T).....	5.11
5.2.3.	Transients in transformers .....	5.12
5.2.4.	Protection of transformer .....	5.13
5.3.	Cooling of Transformers.....	5.13
5.4.	Natural air cooled [NA type] .....	5.13
5.5.	Oil immersed natural cooled transformers [ON type] .....	5.14
5.6.	Oil immersed forced air cooled (OB type) .....	5.14
5.7.	Oil Immersed Forced oil cooled (OIFOC type).....	5.14
5.8.	Forced oil and water cooling [OFW type] .....	5.15
5.9.	Air blast (AB type) .....	5.15
5.10.	Different sections of a transformer [Natural oil cooled] .....	5.15
5.11.	Buchholz Relay .....	5.18
5.12.	Application of Tertiary winding.....	5.19
5.13.	Phase conversion .....	5.31
5.14.	Double star connection.....	5.32
5.15.	Double Delta .....	5.33
5.16.	Six-phase star connections.....	5.34
5.17.	Three phase to Twelve phase transformation .....	5.35
5.18.	Pulse Transformer .....	5.37
5.19.	DOT Notation .....	5.38
5.20.	Marking dots on the coils .....	5.39
5.21.	Examples from dot notation from gate papers.....	5.40
5.22.	Polarity or sense of T/F windings .....	5.42
5.23.	Effect of frequency on performance of T/F .....	5.43
5.24.	Effect of frequency on voltage regulation .....	5.44
5.25.	Effect of frequency on efficiency of T/F.....	5.44
5.26.	Effect of temperature on the performance of T/F.....	5.44
5.27.	Effect of P.F. on the performance of T/F .....	5.45
5.28.	Zig Zag or Inter Connected Star Connection .....	5.45
5.29.	Electronic Transformers .....	5.46
5.30.	Pulse transformers .....	5.47
5.31.	Electro magnetostriction or Transformer HUM.....	5.47
5.32.	Grouping of 3 $\phi$ T/F based on phase relation between Primary and secondary voltages .....	5.47
5.33.	Method of providing YYO, DY11, DY1 and YY6 codes .....	5.48
5.34.	Phase shift between primary & secondary voltage in Different 3 $\phi$ transformers.....	5.50
5.35.	The maintenance schedule and as recommended by the ISI (ISI : 1886-1967) for transformers of rating less than 1000 kVA and above 1000 kVA. ....	5.54

5.36.	Recommended Maintenance Schedule for Transformers of Capacities of 1000 kVA and above.....	5.55
5.37.	Objective Type questions – II.....	5.70
5.38.	Interview Questions for JOBS.....	5.72
5.39.	Problems for practice.....	5.72

**UNIT - 6 : POLYPHASE INDUCTION MOTORS ..... 6.1 - 6.38**

6.1	Induction.....	6.1
6.2	Classification of a.c. motors.....	6.2
6.3	3-Phase Induction Motors.....	6.2
6.4	Advantages of 3 $\phi$ induction motors.....	6.2
	6.4.1 Constructional details of 3 $\phi$ induction motor.....	6.3
	6.4.2 Classification of 3 $\phi$ induction motors.....	6.4
6.5	Squirrel Cage Induction Motor.....	6.5
6.6	Slip-ring induction motor.....	6.6
6.7	Production of RMF [Rotating Magnetic Field].....	6.7
6.8	RMF produced by 3 $\phi$ space spread stator winding.....	6.9
6.9	Production of RMF by analytical Method.....	6.11
6.10	Production of RMF by graphical method.....	6.13
6.11	Principle of operation of 3 $\phi$ induction motor.....	6.15
6.12	Production of starting torque in 3 $\phi$ Induction Motor.....	6.16
6.13A.	Behavior of Induction Motor after starting.....	6.17
6.13B.	Slip-Speed and Slip.....	6.17
6.14	Comparisons between transformer and Induction Motor under no load.....	6.18
6.15	Calculation of Rotor supply frequency.....	6.20
6.16	Different components of Rotor circuit.....	6.21
6.17	Production of Rmf by Rotor winding.....	6.23
6.18	Equivalent Diagram of Induction Motor.....	6.24
6.19	Calculation of equivalent resistance of Mechanical load.....	6.26
6.20	Simplified equivalent diagram of 3 $\phi$ Induction Motor.....	6.27

**- 7 : PERFORMANCE OF INDUCTION MOTORS..... 7.1 - 7.23**

7.1	Different losses of an Induction Motor.....	7.1
7.2	Power flow diagram.....	7.1
7.3	Different efficiencies.....	7.2
7.4	Relation between different components.....	7.2
7.5	Torque equation of induction Motor.....	7.11
7.6	Condition for Maximum torque.....	7.13
7.7	Calculation of Max torque.....	7.13

7.8	Calculation of Max Starting torque .....	7.14
7.9	Relation between starting torque and Maximum Torque .....	7.14
7.10	Relation between Full-load Torque and Maximum Torque .....	7.14
7.11	Different types of torques – induction motor .....	7.23

**UNIT - 8 : TORQUE–SLIP CHARACTERISTICS OF INDUCTION MOTOR..... 8.1 - 8.29**

8.1	Torque equation from Equivalent circuit .....	8.2
8.2	Effect of slip on different components .....	8.5
8.3	Characteristics of 3 $\phi$ Induction motor .....	8.6
8.4	Study of torque curves .....	8.8
8.5	Slip-torque characteristics for different rotor resistances .....	8.8
8.6	Effect of frequency on torque speed and current of Induction Motor .....	8.9
8.7	No load test .....	8.9
8.8	Blocked Rotor Test .....	8.11
8.9	Calculating copper losses and stator current for normal working voltage .....	8.13
8.10	Brake Test .....	8.17
8.11	<i>Objective Questions in Induction Motors – I</i> .....	8.19

**UNIT - 9 : CIRCLE DIAGRAM ..... 9.1 - 9.21**

9.1	Circle Diagram .....	9.1
9.2	What is a circle diagram? .....	9.2
9.3	Study of circle diagram from fundamentals .....	9.2
9.4	Circle diagram for equivalent circuit of Induction Motor .....	9.3
9.5	Construction of circle diagram .....	9.3
9.6	Step-by-step procedure .....	9.4
9.7	Application of circle diagram .....	9.7
9.8	Location of operating point at different condition .....	9.8

**UNIT -10 : 3- $\phi$  INDUCTION MOTOR STARTERS ..... 10.1 - 10.21**

10.1	Starting conditions of 3 $\phi$ Induction Motor .....	10.1
10.2	Torque relation .....	10.2
10.3	Different types of starters .....	10.4
10.4	DOL Starter .....	10.4

10.5	Star-Delta Starter .....	10.6
10.6	Series reactor or resistance starter .....	10.9
10.7.	Auto-transformer starters .....	10.14
10.8	Comparing auto transformer starter with direct switching ....	10.15
10.9	Rotor Resistance starter .....	10.16
10.10.	Design of rotor resistance starter .....	10.17
10.11.	Silicon Controlled Rectifier (SCR) Control .....	10.20
<b>UNIT - 11 : SPEED CONTROL AND BRAKING.....</b>		<b>11.1 - 11.68</b>
11.1.	Controlling synchronous speed $N_s$ .....	11.1
11.2.	Changing torque.....	11.2
11.3	Changing rotor resistance .....	11.2
11.4	Speed control by changing applied voltage .....	11.3
11.5	Speed control by pole changing method .....	11.3
11.6	Multiple stator winding.....	11.4
11.7	Consequent Pole Technique .....	11.4
11.8	Reversing continuous pole Technique .....	11.5
11.9	Pole amplitude modulation (PMM) technique .....	11.6
	11.9.1 Coil Inversion.....	11.7
	11.9.2 Coil Inversion and Omission .....	11.8
11.10	Effect of Frequency on speed and torque.....	11.10
11.11	Frequency control of speed .....	11.11
11.12	Voltage/frequency ratio control or voltage Hertz control .....	11.11
11.13	Comparing the speed equation of 1.M with d.c. motor .....	11.11
	11.13.1 Speed control by changing rotor Resistance .....	11.12
11.14	Speed control by cascade connection.....	11.13
11.15	Injecting voltage in to rotor circuit at slip frequency.....	11.15
11.16	Schrage motor.....	11.15
	11.16.1 Working of Schrage motor .....	11.18
	11.16.2 peed control.....	11.19
	11.16.3 Power factor control .....	11.20
11.17	Cogging or magnetic locking .....	11.21
11.18	Crawling .....	11.21
11.19	Comparison between squirrel cage and slip-ring Induction Motor.....	11.23
11.20	Double cage induction motor .....	11.24
11.21	Deep bar rotors.....	11.26
11.22	Different States or modes of induction motor.....	11.28

11.23	Generating mode or Induction generator .....	11.29
11.24	The equivalent Diagram of Induction generator.....	11.30
11.25	Circle Diagram of 1.M and 1.G .....	11.31
11.26	Comparison between Induction motor and generator.....	11.31
11.27(A)	Merits and demerits of induction generator .....	11.32
11.27(B)	Application of induction generator .....	11.32
11.28	Comparison between Induction and Sy. Motors .....	11.32
11.29	Power flow diagram of induction generator.....	11.33
11.30	High efficient induction motors .....	11.33
11.31	Braking of 3 $\phi$ induction motors .....	11.34
11.32	Regenerative braking .....	11.34
11.33	Dynamic braking or D.C. braking.....	11.35
11.34	Plugging.....	11.36
11.35	Synchronous induction motor .....	11.38
11.36	Comparison between synchronous and induction motors.....	11.39
11.37	Problems for Practice in Induction Motors.....	11.40
11.38	Objective Questions in Induction Motors- II.....	11.51
<b>APPENDIX – I (SOLVED QUESTIONS) .....</b>		<b>A.I.1 – A.I.37</b>
<b>APPENDIX – II (AUG/Sep-2008 QUESTION &amp; Answers) .....</b>		<b>A.II.1 – A.II.10</b>
<b>APPENDIX – III (Unsolved April/May Question Papers) .....</b>		<b>A.III.1 – A.III.4</b>
<b>INDEX .....</b>		<b>I.1 – I.2</b>
<b>BIBLIOGRAPHY</b>
