Contents

Chapter 1	Probability	1.1 - 1.43
1.1	Introduction	1.1
1.2	Sample space	1.1
1.3	Event	1.1
1.4	Exhaustive Event	1.1
1.5	Favourable Event	1.2
1.6	Mutually Exclusive Events	1.2
1.7	Equally Likely Events	1.2
1.8	Independent Events	1.2
1.9	Probability	1.2
1.10	Axioms of Probability	1.3
1.11	Extension of General Law of Addition of Probabilities	1.5
1.12	Conditional Probability	1.6
1.13	Multiplication Law of Probability	1.6
1.14	Multiplication Law of Probability for Independent Events	1.7
1.15	Extension of Multiplication Law of Probability	1.7
1.16	Total Probability	1.13
1.17	Baye's Theorem	1.17
1.18	Mathematical Expectations	1.22
	Exercise	1.42
Chapter 2	Solution of Non-Linear and Simultaneous Linear Equation	2.1 - 2.69
2.1	Introduction	2.1
2.2	Bisection Method (Bolzano Method)	2.1
2.3	Method of False Position (Regula Falsi Method)	2.10
2.4	Newton - Raphson Method	2.22
2.5	Fixed Point Iteration (or) Simple Iteration Method	2.34
2.6	Solution of Simultaneous Linear Algebraic Equations and Eigenvalue Problems	2.42
	2.6.1 Gauss-Elimination method (Direct method)	2.42
	2.6.2 Gauss-Jordan elimination method (Direct method)	2.44
2.7	Triangularisation Method	2.50

2.8	Iterative Methods (Indirect Method)	2.55
2.8.1	Gauss-Jacobi method	2.56
2.8.2	Gauss-Seidel method of iteration	2.57
	Exercise	2.68
Chapter 3 Scheduling by PERT and CPM		3.1 - 3.44
3.1	Introduction	3.1
3.2	Basic Components in Network Analysis	3.1
3.2.1	Worked examples	3.5
3.3	Programme Evaluation and Review Technique (PERT)	3.20
3.3.1	PERT procedure	3.21
3.4	Distinction between PERT and CPM	3.34
3.5	Resource Analysis in Network Scheduling	3.35
3.6	Time Cost Optimization Algorithm	3.36
Chapter 4 Queueing Models		4.1 - 4.64
4.1	Introduction	4.1
4.2	Queueing System	4.1
4.3	Characteristics of Queueing Models	4.1
4.3.1	Kendall's notation for queueing models	4.3
4.3.2	Little's formulae	4.4
4.3.3	Transient and steady states	4.4
4.4	Solution of Queueing Models	4.5
4.4.1	Characteristics of the queue	4.8
	Exercise	4.62
Chapter 5 Formal Languages & Finite Automata		5.1 - 5.32
5.1	Introduction	5.1
5.2	Definition of a Finite Automaton	5.1
5.3	Procedure for Construction of the State Diagram	5.1
5.4	Acceptability of a String by a Finite Automaton	5.2
5.5	Language Accepted by FSA	5.3
5.6	Deterministic and Nondeterministic FSA's	5.4
5.7	Non-deterministic Finite Automaton	5.5
5.8	Acceptability of a String by NFA	5.6
5.9	Language Accepted by NFA	5.6
5.10	Equivalent DFA for any given NFA	5.10
5.11	Procedure for Finding an FA Equivalent to a given NFA	5.10
5.12	Basic Definition	5.12
5.13	Phrase-Structure Grammar	5.13
5.14	Language L(G) of a Grammar G	5.13

5.15	Types of Phrase-Structure Grammar	5.13
5.16	Type 0 Grammar	5.14
5.17	Context Sensitive Grammar	5.14
5.18	Context Free Grammar	5.14
5.19	Regular Grammar	5.14
5.20	Generation Tree of a Grammar	5.19
5.21	Example of a Generation Tree	5.19
5.22	Derivation Tree for a String	5.19
5.23	Leftmost/Rightmost Derivation	5.20
5.24	Ambiguity	5.21
5.25	Turing Machine	5.24
5.26	Atomic Operations	5.25
5.27	The Instruction Table	5.26
5.28	An Example	5.26
5.29	Turing Machine	5.26
5.30	Representation of TM by Transition Diagram	5.27
5.31	Instantaneous Description of a TM	5.28
5.32	Instantaneous Description of a Turing Machine	5.28
5.33	Move of a Turing Machine	5.28
5.34	Language Accepted by Turing Machine	5.29
5.35	Pumping Lemma	5.31
	Exercise	5.32
Chapter 6	Mathematical Logic	6.1 - 6.40
6.1	Introduction	6.1
6.1.1	Definition	6.1
6.1.2	Connectives	6.2
6.1.3	Worked examples	6.3
6.2	Equivalence Formulas	6.8
6.2.1	Implication	6.8
6.2.2	Duality law	6.13
6.2.3	Normal forms	6.16
6.2.4	Inference theory	6.21
6.3	Predicate Calculus	6.30
6.4	The Statement Function, Variables and Quantifiers	6.30
6.5	Universal Quantifiers	6.31
6.6	Free and Bound Variables	6.32
6.7	Scope of the Quantifier	6.32
6.8	Inference Theory for Predicate Calculus	6.34
6.9	Universal Specification	6.34
6.10	Universal Generalisation	6.34

6.11	Existential Specification	6.34
6.12	Existential Generalisation	6.34
6.13	Functionally Complete Sets of Connectives	6.38

Chapter 7	Basic Set Theory	7.1 - 7.49
7.1	Introduction	7.1
7.2	SET	7.1
7.3	Finite Set	7.1
7.4	Cardinality	7.1
7.5	Subset	7.2
7.6	Equal Sets	7.2
7.7	Null Set (or) Empty Set	7.2
7.8	Singleton Set	7.2
7.9	Universal Set	7.2
7.10	Union	7.2
7.11	Intersection	7.3
7.12	Disjoint Sets	7.3
7.13	Difference Set	7.3
7.14	Complement Set	7.3
7.15	Power Set	7.4
7.16	Principle of Inclusion and Exclusion	7.7
7.17	Ordered Pair	7.11
7.18	Cartesian Products	7.11
7.19	Partition of a Set	7.13
7.20	Minsets	7.13
7.21	Minset	7.14
7.22	Max Set	7.15
7.23	Binary Relation	7.15
7.24	Complementary Relation	7.16
7.25	Inverse Relation	7.16
7.26	Union and Intersection of Two Relations	7.17
7.27	Symmetric Relation	7.17
7.28	Anti-Symmetric Relation	7.17
7.29	Reflexive Relation	7.17
7.30	Transitive Relation	7.17
7.31	Equivalence Relation	7.18
7.32	Partially Ordering Relation	7.18
7.33	Definition	7.18
7.34	Domain and Range of a Relation	7.20
7.35	Composition of Relations	7.21
7.36	Matrix of a Relation	7.24

7.37	Digraph of a Relation	7.25
7.38	Equivalence Classes	7.28
7.39	Functions	7.32
7.40	Definition- Function	7.32
7.41	Types of Functions	7.32
7.42	Classification of Functions	7.33
7.43	Algebraic Function	7.33
7.44	Transcendental Function	7.34
7.45	Composition of Functions	7.34
7.46	Permutations	7.40
7.47	Combination	7.40
7.48	Permutations with Repetition	7.41
7.49	Circular Permutation	7.41
	Exercise	7.47

Chapter 8	Matrix Algebra	8.1 - 8.35
------------------	-----------------------	-------------------

8.1	Introduction	8.1
8.2	Matrix	8.1
8.3	Rank of a Matrix	8.1
8.4	Elementary Transformations	8.2
8.5	Solution of a System of Linear Equations	8.4
8.6	Eigen Values and Eigen Vectors	8.9
8.7	Singular and Non-Singular Matrix	8.23
8.8	Inverse (or Reciprocal) of a Square Matrix	8.23
8.9	The Inverse of a Square Matrix, if it Exists, is Unique	8.24
8.10	Adjoint of a Square Matrix	8.24
8.11	Cayley Hamilton Theorem	8.26
	Exercise	8.32

Index	I.1 - I.2
