Solid State Physics

Dr. P. K. Palanisamy

Former Emeritus Professor (UGC)

Head, Department of Physics

Chairman, Faculty of Science and Humanities

Anna University, Chennai

Publishing for future

SCITECH PUBLICATIONS (INDIA) PVT LTD

Contents

1	Crystal Structure	1.1 - 1.32
1.1	Introduction	1.1
1.2	Crystal Lattice	1.1
	1.2.1 Primitive and Unit cell	1.2
	1.2.2 Bravais lattices	1.3
1.3	Seven Classes of Crystals	1.4
1.4	Structure of Crystals	1.5
	1.4.1 Simple Cubic (SC) structure	1.6
	1.4.2 Body centred cubic (BCC) structure	1.7
	1.4.3 Close packed structures-FCC and HCP	1.8
1.5	Other Cubic Structures	1.13
	1.5.1 Diamond cubic structure	1.13
	1.5.2 Zinc sulphide or zinc blende cubic structure	1.15
	1.5.3 Sodium chloride structure	1.15
	1.5.4 Caesium chloride structure	1.16
1.6	Directions in Crystals	1.21
1.7	Planes in Crystals-Miller Indices	1.22
	1.7.1 Procedure for finding Miller indices	1.22
	1.7.2 Important features of Miller indices	1.23
1.8	Distances of Separation between Successive (<i>hkl</i>) Planes	1.24
1.9	Conclusion	1.28
	Summary	1.29
	Review Questions	1.31
	Exercise Problems	1.32
2	Diffraction of X-rays by Crystals	2.1 - 2.18
2.1	Introduction	2.1
2.2	Diffraction of X-rays by Crystals	2.1
	2.2.1 Bragg's law in one dimension	2.1
	2.2.2 Production of X-rays	2.3
	2.2.3 Determination of lattice parameters-Bragg's X-ray spectrometry method	2.3
2.3	Experimental Methods in X-ray Diffraction	2.6
	2.3.1 The Laue method	2.6
	2.3.2 The Powder method (Debye-Scherrer method)	2.7
	2.3.3 The rotating crystal method	2.9
2.4	Reciprocal - Lattice Concept	2.12

2.5	Von-Laue's three equations	2.13
2.6	Conclusion	2.16
	Summary	2.16
	Review Questions	2.17
	Exercise Problems	2.18
3	Defects in Solids	3.1 - 3.18
3.1	Introduction	3.1
3.2	Imperfections in Crystals	3.1
	3.2.1 Point defects	3.2
	3.2.2 Frenkel and Schottky defects	3.2
	3.2.3 Electronic defects	3.2
	3.2.4 Energy of Formation of a Vacancy	3.4
	3.2.5 Number of vacancies at any temperature in elemental solids	3.4
	3.2.6 Equilibrium concentration of Schottky defects in ionic crystals	3.6
	3.2.7 Equilibrium concentration of Frenkel defects in ionic solids	3.8
3.3	Line Defects	3.9
	3.3.1 Edge dislocation	3.9
	3.3.2 Burgers vector	3.10
	3.3.3 Screw dislocation	3.10
3.4	Surface Imperfections	3.12
3.5	Stacking Faults	3.12
3.6	Twin Boundary	3.12
3.7	Volume Defects	3.13
3.8	Effects of Crystal Imperfections	3.13
3.9	Conclusion	3.15
	Summary	3.15
	Review Questions	3.16
	Exercise Problems	3.18
4	Magnetic Properties	4.1 - 4.32
4.1	Introduction	4.1
	4.1.1 Permeability	4.1
	4.1.2 Magnetization	4.2
4.2	Different Types of Magnetic Materials	4.5
	4.2.1 Diamagnetism	4.5
	4.2.2 Paramagnetism	4.6
	4.2.3 Ferromagnetism	4.7
	4.2.4 Antiferromagnetism	4.8
	4.2.5 Ferrimagnetism	4.9
4.3	Classical Theory of Diamagnetism (Langevin's theory)	4.10
4.4	Langevin's Theory of Paramagnetism	4.14

4.5	Weiss theory of paramagnetism	4.18
4.6	Ferromagnetism	4.20
4.7	Explanation of Heisenberg's Internal Field and Quantum Theory of Ferromagnetism	4.21
4.8	Domain theory of ferromagnetism	4.25
	4.8.1 Observation of domains – Bitter powder patterns	4.26
	4.8.2 Hysteresis	4.27
	4.8.3 Hard and Soft materials	4.29
4.9	Conclusion	4.30
	Summary	4.30
	Review Questions	4.31
	Exercise Problems	4.32
5	Dielectric Properties	5.1 - 5.32
5.1	Introduction	5.1
5.2	Fundamental Definitions	5.1
5.3	Different Types of Electric Polarization Processes	5.3
	5.3.1 Electronic polarization	5.3
	5.3.2 Calculation of electronic polarizability	5.4
	5.3.3 Ionic Polarization	5.6
	5.3.4 Orientational polarization	5.7
	5.3.5 Space-charge polarization	5.7
5.4	Frequency Effect on Polarization	5.8
5.5	Temperature Effect on Polarization	5.9
5.6	Dielectric loss	5.10
5.7	Internal Field: (Lorentz Method)	5.11
	5.7.1 Clausius - Mosotti relation	5.14
5.8	Determination of Dielectric constant and loss tangent	5.15
5.9	Dielectric Breakdown	5.17
5.10	Properties of Different types of insulating materials	5.19
	5.10.1 Classification of insulating materials	5.20
	5.10.2 Important applications of dielectric materials	5.23
5.11	Conclusion	5.29
	Summary	5.29
	Review Questions	5.31
	Exercise Problems	5.32
6	Bonding in Solids	6.1 - 6.24
6.1	Introduction	6.1
6.2	Types of Bonds in Crystal	6.1
6.3	Ionic Bonding	6.2
	6.3.1 Bond energy of <i>NaCl</i> molecule	6.3

6.4	Covalent (Valence) Bonding	6.6
6.5	Metallic Bonding	6.10
6.6	Hydrogen Bonding	6.11
6.7	Van der Waals (Molecular) Bonding	6.12
6.8	Variation of Interatomic Force with Interatomic Spacing	6.13
6.9	Cohesive Energy	6.14
6.10	Cohesive Energy of Ionic Solids	6.17
	6.10.1 Application to sodium chloride crystal	6.18
	6.10.2 Evaluation of Madelung constant for $NaCl$	6.20
6.11	Conclusion	6.21
	Summary	6.21
	Review Questions	6.23
	Exercise Problems	6.24
7	Specific Heat of Solids and Lattice Vibrations	7.1 - 7.21
7.1	Introduction	7.1
7.2	Phonons of Monoatomic one Dimensional Lattice	7.1
7.3	Specific Heat of Solids	7.5
	7.3.1 Classical Theory (Dulong and Petit Law)	7.6
	7.3.2 Einstein's Theory of the Specific Heat	7.8
	7.3.3 Debye's Theory of the Specific Heat	7.11
7.4	Conclusion	7.19
	Summary	7.19
	Review Questions	7.20
	Exercise Problem	7.21
8	Superconductivity	8.1 - 8.22
8.1	Introduction	8.1
8.2	General Properties of Superconductors	8.2
8.3	Effect of Magnetic Field	8.3
	8.3.1 The Meissner effect	8.4
8.4	Effect of Current	8.5
8.5	Thermal Properties	8.5
	8.5.1 Entropy	8.6
	8.5.2 Specific heat	8.6
	8.5.3 Energy gap	8.7
8.6	Isotope Effect	8.8
8.7	London Equations	8.9
	8.7.1 Penetration depth	8.10
8.8	Josephson Effect	8.11
	8.8.1 D.C. Josephson effect	8.12
	8.8.2 A.C. Josephson effect	8.12

8.8.3	Applications of Josephson effect	8.13
8.9	Type I and Type II Superconductors	8.14
8.10	Explanation for the Occurrence of Superconductivity BCS Theory	8.15
8.11	High- T_c Superconductivity-New Developments	8.16
8.12	Applications of Superconductors	8.18
8.13	Conclusion	8.20
	Summary	8.20
	Review Questions	8.21
	Exercise Problems	8.22
Appendix		A.1
Index		I.1 - I.3
Previous Year Question Paper (April - 2006)		Q.P.1 - Q.P.2
Bibliography		B.1

Solid State Physics

This book is prepared in accordance with the "Solid State Physics" syllabus of B.Sc (Physics) curriculum

Salient features

- Written aiming 100% coverage of Solid State Physics syllabus of B.Sc. (Physics)
- Typical questions are included at the end of each chapter.
- Summary of the entire text is given at the end of each chapter.
- Solved and exercise problems are included to develop the analytical skill of the students.

Dr.P.K.Palanisamy is a former Emeritus Professor of UGC, Chairman, Faculty of Science and Humanities and Head of the Department of Physics, Anna University with 40 years of experience in teaching engineering students. He received his M.Sc. degree in Physics from Madras University and Ph.D. in the field of Laser Technology from Anna University. He joined Technical Education in 1974 and Anna University in 1979. He has published more than 100 research papers in reputed international journals and attended many national and international conferences. He was the Principal Investigator for many projects funded by UGC, DST, AICTE and Govt. of Tamilnadu. He has guided 11 students for their Ph.D. in the field of Applied Optics. His research interests include Holography, Nonlinear Optics, Optical Instrumentation, Laser Optics and Nanophotonics. He has authored many books which are prescribed as text/reference books in many prestigious universities. He is a member of SPIE, Optical society of India, Indian Laser Association and ISTE.

Other Textbooks of the author written based on B.Sc (Physics) syllabi

- *Relativity and Quantum Mechanics*
- *Electromagnetism*
