Probability and Queueing Theory

Seventh Edition

Dr.M.B.K.Moorthy

Professor and Head (Retired),
Department of Mathematics
Institute of Road and Transport Technology
(Automobile Research Institute)
Erode - 638 316.

Dr.K.Subramani

Associate Professor

Dr.A.Santha

Associate Professor,
Department of Mathematics
Kumaraguru College of Technology
Coimbatore - 641 006.

Publishing for future

Contents

Chapter 1	Random Variables	1.1 - 1.223
1.1	Probability and Random Variables	1.1
1.1.1	Introduction	1.1
1.2	Random Variable	1.14
1.2.1	Discrete random variable	1.14
1.2.2	Probability mass function	1.14
1.2.3	Continuous random variable	1.15
1.2.4	Distribution function	1.15
1.3	Mathematical Expectation and Moments	1.32
1.3.1	Expectation	1.32
1.3.2	Properties of mathematical expectation	1.33
1.3.3	Moments	1.34
1.3.4	Moment Generating Function (M.G.F)	1.53
1.4	Binomial Distribution	1.79
1.4.1	Moments of binomial distribution about the origin	1.81
1.4.2	Moment Generating Function (M.G.F)	1.82
1.4.3	Additive property of binomial distribution	1.83
1.5	Poisson distribution	1.102
1.5.1	Definition	1.102
1.5.2	Poisson distribution is the limiting case of binomial distribution	1.102
1.5.3	Moments about origin of poisson distribution	1.103
1.5.4	Moment Generating Function (M.G.F), Mean and Variance	1.104
1.5.5	Recurrence relation for the moments of the Poisson distribution	1.106
1.5.6	Additive property of poisson distribution	1.107
1.6	Geometric Distribution	1.122
1.6.1	Definition	1.123
1.6.2	Moment generating function of geometric distribution	1.123
1.6.3	Another form of geometric distribution	1.124
1.6.4	Memoryless property of geometric distribution	1.124
1.7	Uniform Distribution	1.133
1.7.1	Definition	1.133
1.7.2	Moments of uniform distribution	1.134
1.7.3	Moment generation function	1.135
1.8	Exponential Distribution	1.147

1.8.1	Definition	1.147
1.8.2	Cumulative distribution function	1.147
1.8.3	Moments, mean and variance	1.147
1.8.4	Moment generating function, mean and variance	1.148
1.8.5	Memoryless property of exponential distribution	1.148
1.9	Gamma Distribution	1.161
1.9.1	Definition	1.162
1.9.2	Moments of general gamma distribution	1.162
1.9.3	Moment generating function of general gamma distribution	1.163
1.9.4	Definition: gamma distribution	1.163
1.9.5	M.G.F of gamma distribution	1.164
1.9.6	Mean and variance of gamma distribution	1.164
1.10	Normal Distribution	1.170
1.10.1	Definition	1.170
1.10.2	Characteristics of normal distribution and normal probability curve	1.170
1.10.3	Moment generating function of normal distribution	1.171
1.10.4	Moments of normal distribution	1.172
1.10.5	Mean and variance of normal distribution using M.G.F	1.174
1.10.6	Median and mode of normal distribution	1.174
1.10.7	Standard normal distribution	1.176
1.10.8	Basic properties of standard normal curve	1.176
1.10.9	Additive property of normal distribution	1.176
1.11	Functions of a Random Variable (Transformation of one dimensional Random Variables)	1.195
1.11.1	Definition	1.195

Chapter 2 Two Dimensional Random Variables 2.1 - 2.161

2.1	Introduction	2.1
2.1.1	Definition: joint probability distribution	2.1
2.1.2	Types of two-dimensional random variables	2.1
2.1.3	Joint probability mass function of (X, Y)	2.2
2.1.4	Joint probability density function	2.2
2.1.5	Joint cumulative distribution function	2.3
2.1.6	Properties of cumulative distribution function	2.3
2.1.7	Definition : marginal distributions	2.3
2.1.8	Conditional probability distribution	2.4
2.1.9	Independence of two random variables	2.5
2.1.10	Expectation of a function $g(X, Y)$	2.5

2.1.11	Conditional mean and conditional variance	2.5
2.1.12	Covariance	2.48
2.1.13	Results on covariance	2.48
2.1.14	Variances	2.48
2.1.15	Results on variance	2.48
2.2	Correlation and Regression	2.57
2.3	Regression	2.99
2.3.1	Definition	2.99
2.3.2	Lines of regression	2.99
2.3.3	Regression equation	2.99
2.3.4	Angle between regression lines	2.100
2.3.5	Regression curves of the means	2.101
2.4	Transformation of Random Variables	2.122
2.4.1	Joint probability density function	2.122

Chapter 3 Random Processes 3.1 - 3.104

3.1	Random Processes and their Classification	3.2
3.2	Stationary Process	3.4
3.3	Markov Process	3.28
3.4	Markov Chain	3.29
3.4.1	Chapman-Kolmogorov theorem	3.30
3.4.2	Classification of states of a Markov chain	3.33
3.5	Poisson Process	3.69
3.6	Birth and Death Process	3.87

Chapter 4 Queueing Models 4.1 - 4.92

4.1	Model I (M/M/1):(∞ /FIFO) (Single Server, infinite capacity queue)	4.4
4.2	Model II (M/M/c): (∞ /FIFO) (Multi Server, infinite capacity Queue)	4.24
4.3	Model III (M/M/1):(k/FIFO) [Single server, finite capacity queue]	4.47
4.4	Model IV (M/M/c)(k/FIFO) - (Multi server finite capacity queue)	4.61
4.5	M/M/ ∞ Model (Queues with unlimited service)	4.71
4.6	Finite Source Models (Machine interference model)	4.75
4.7	Queues with Impatient Customers	4.85

Chapter 5 Advanced Queueing Models 5.1 - 5.65

5.1	Model V (M/G/1): (∞ /GD)	5.1
5.1.1	Pollaczek-Khinchine formula (P-K formula)	5.1
5.1.2	M/D/1 queue	5.4
5.1.3	M/ E_k /1 queue	5.4

5.1.4	(M/M/1) queue	5.5
5.2	Queueing Networks	5.24
5.3	Series Queues with Blocking	5.26
5.4	Series Queue with Infinite Capacity	5.35
5.5	Series Queues	5.37
5.6	Series Queues: k Stations, Infinite capacity, Multiserver model . .	5.40
5.7	Open Network (General case)	5.42
5.8	Closed Network (Closed Jackson network)	5.52
	Fully Solved University Question Papers	UQ.1-UQ.18
	Appendix	A.1-A.7
	Index	I.1-I.2

SCITECH
