Contents

Chapter 1	Introduction to Microprocessor	1 - 10
1.1	Introduction to Microprocessors	1
1.1.1	Evolution of microprocessor	1
1.1.2	Introduction	1
1.1.3	Timeline of microprocessor evolution	2
1.1.4	Classification of microprocessors	2
1.1.5	Functional block diagram of microprocessor	3
1.1.6	Advantages of microprocessor	4
1.2	Computer and its Organization	4
1.3	Programming System	6
1.3.1	Programming languages	6
1.3.2	Format of an assembly language instruction	7
1.3.3	Assembly language program - development tools	8
1.4	Buses	8
1.4.1	Types of buses	9
1.4.2	Example - memory read operation	9
1.5	Tristate Bus	10
Chapter 2	The Intel 8086 Microprocessor	11 - 107
2.1	Features of 8086	11
2.2	Architecture of 8086	12
2.2.1	Bus Interface Unit [BIU]	12
2.2.2	Execution Unit (EU)	15
2.3	Interrupt Processing	18
2.3.1	Response to an interrupt	19
2.3.2	Classification of interrupts	19
2.3.3	Interrupt priority	20
2.3.4	Interrupt sequence for INTR	21
2.3.5	Interrupt Service Routines (ISR)	21
2.4	Introduction to Programming	23
2.5	Memory Address Computation	23
2.6	Addressing Modes of 8086	23
2.6.1	Register addressing mode	24
2.6.2	Immediate addressing mode	24
2.6.3	Memory addressing modes	25
2.6.4	I/O addressing mode	29

2.6.5	Relative addressing mode	30
2.7	Instruction Set of 8086	30
2.7.1	Data transfer instructions	30
2.7.2	I/O instructions	33
2.7.3	Flag manipulation instructions	34
2.7.4	Arithmetic instructions	35
2.7.5	Logical instructions	46
2.7.6	Shift and rotate instructions	48
2.7.7	String instructions	54
2.7.8	Machine or processor control instructions	55
2.7.9	Control transfer instructions	56
2.7.10	Interrupt instructions	62
2.8	Assembler Directives	63
2.9	8086 Assembly Language Programming	68
2.10	Modular Programming	76
2.10.1	Introduction	76
2.10.2	Linking and relocation	77
2.10.3	Segment combination	79
2.11	Stacks	82
2.12	Procedures	84
2.12.1	Call	85
2.12.2	RET	85
2.12.3	Procedure definition	85
2.12.4	Procedure communication	86
2.12.5	Recursive procedures	87
2.13	Macros	89
2.13.1	Macro definition	90
2.13.2	Nested macros	92
2.14	BIOS Interrupts or Function Calls	92
2.14.1	INT 10 _H	93
2.14.2	INT 11 _H	95
2.14.3	INT 12 _H	95
2.14.4	INT 13 _H	95
2.14.5	INT 14 _H	96
2.14.6	INT 15 _H	97
2.14.7	INT 16 _H	97
2.14.8	INT 17 _H	98
	Short Question with Answers	98

Chapter 3	8086 System Bus Structure	109 - 214
3.1	8086 - Pins and Signals	109
3.2	External Memory Addressing	115
3.2.1	Case (i): 8 bit data transfer	116
3.2.2	Case(ii):16 bit transfer:16 bit data is stored in two memory locations	117
3.2.3	Memory segmentation	118
3.2.4	Advantages of memory segmentation	118
3.3	Memory Interfacing	118
3.3.1	Interfacing EPROM to 8086	118
3.3.2	Inter facing RAM to 8086	120
3.3.3	Generation of control signals for the memory	121
3.4	Modes of Operation	121
3.5	8086 In Minimum Mode Configuration	122
3.5.1	Minimum mode	122
3.5.2	Minimum mode bus cycle	122
3.6	8086 in Maximum Mode Configuration	125
3.6.1	Maximum mode	126
3.6.2	Maximum mode bus cycle	127
3.7	Multiprocessor Configuration	129
3.7.1	Multiprocessor	129
3.7.2	Need for multiprocessor system	129
3.7.3	Advantages	130
3.8	Configurations of Multiprocessor System	131
3.8.1	Coprocessor configuration	131
3.8.2	Closely coupled configuration	133
3.8.3	Loosely coupled configuration	134
3.9	Interconnection Topologies	139
3.9.1	Shared bus architecture	139
3.9.2	Multiport memory	140
3.9.3	Linked Input / Output	140
3.9.4	Cross bar switching	140
3.10	Physical Interconnections between Processors	141
3.10.1	Star configuration	141
3.10.2	Ring or loop configuration	142
3.10.3	Completely connected configuration	142
3.10.4	Regular topology	142
3.10.5	Irregular topology	143
3.11	Intel 8087 - Numeric Data Processor	143

3.11.1	Features of 8087	143
3.11.2	Architecture of 8087	144
3.11.3	Pins of 8087	150
3.11.4	Data types	152
3.11.5	Interconnection of 8087 with 8086	153
3.11.6	Communication between 8086 and 8087	154
3.12	I/O Processor Intel 8089	155
3.12.1	Features of IOP 8089	156
3.12.2	Architecture of Intel 8089	157
3.12.3	Pin diagram of 8089	160
3.12.4	Operation of 8089	162
3.12.5	Communication between CPU and IOP	165
3.13	Introduction to Advanced Microprocessors	168
3.14	Intel 80186 Microprocessor	169
3.14.1	Features of 80186 microprocessor	169
3.14.2	Addressing modes	173
3.14.3	Data types supported by 80186 microprocessor	173
3.14.4	Additional instructions	174
3.15	Intel 80286	174
3.15.1	Features	174
3.15.2	Functional diagram of 80286 microprocessor	175
3.15.3	Other important concepts related to 80286 microprocessor	176
3.15.4	Modes of operation	177
3.15.5	Addressing modes of 80286 microprocessor:	178
3.15.6	Memory management features	179
3.16	Intel 80386 Microprocessor	179
3.16.1	Features	179
3.16.2	Architecture of 80386	180
3.16.3	Addressing modes	183
3.16.4	Modes of operation of 80386 microprocessor	184
3.16.5	Change of mode	188
3.16.6	Addressing modes	188
3.17	Intel 80486	189
3.17.1	Features	189
3.17.2	Architecture	189
3.17.3	Register structure	191
3.17.4	Other concepts related to 80486	194
3.18	Pentium Processor	195
3.18.1	Features	196

Chapter 4 Microprocessor Peripheral Interfacing 215 - 341

4.1	Introduction	215
4.2	Features of Programmable Peripheral Devices	216
4.3	Requirements for a Programmable Peripheral Device	216
4.4	Elements of a Programmable Peripheral Device	216
4.5	Generation of I/O Ports	217
4.6	Programmable Peripheral Interface Intel 8255	219
4.6.1	Features of 8255	219
4.6.2	Block diagram of intel 8255	220
4.6.3	Modes of operation	222
4.6.4	Bit Set/Reset mode (BSR)	223
4.6.5	I/O mode	224
4.7	Keyboard and Display Interface	232
4.7.1	Keyboard interface	232
4.7.2	Display interface	235
4.8	Programmable Keyboard / Display Controller Intel 8279	237
4.8.1	Features of Intel 8279	237
4.8.2	Block diagram of 8279	238
4.8.3	Signals of 8279	240
4.8.4	Modes of operation	242
4.8.5	Programming the 8279	244
4.8.6	Sequence of steps	248
4.8.7	Examples to identify a key press	248
4.9	Programmable Timer / Counter Intel 8253 (8254)	250
4.9.1	Features of 8254	250
4.9.2	Block diagram of 8254	251
4.9.3	Modes of operation	254
4.9.4	Programming the 8254	257
4.10	Analog to Digital Converters (ADC)	260
4.10.1	Basic concepts	260
4.10.2	Successive approximation A/D converter	261
4.10.3	ADC 0808 / 0809	262
4.10.4	Interfacing ADC 0808/0809	263
4.10.5	Flow chart for ADC conversion software	264
4.10.6	Program	265
4.11	Digital to Analog converter (DAC)	265
4.11.1	Basic concepts	265
4.11.2	Basic conversion techniques	266

4.11.3	DAC 1408	269
4.11.4	Interfacing DAC 1408 with microprocessor	271
4.11.5	Flow chart for DAC Conversion	272
4.12	Intel 8259 - Programmable Interrupt Controller	274
4.12.1	Features of Intel 8259	275
4.12.2	Block diagram of 8259	275
4.12.3	Pin details of 8259	278
4.12.4	Interrupt operation	278
4.12.5	Programming the 8259	280
4.12.6	Priority modes	283
4.12.7	End of interrupt	284
4.12.8	Additional features	284
4.13	DMA - Direct Memory Access	284
4.14	Intel 8237 DMA Controller	285
4.14.1	Features	286
4.14.2	Architecture of 8237	286
4.14.3	Pin details of 8237	292
4.14.4	Initializing the 8237	294
4.14.5	DMA execution	295
4.14.6	Modes of DMA	296
4.14.7	Interfacing 8237 with 8085	297
4.15	Serial Communication	299
4.16	Intel 8251 USART	300
4.16.1	Features of 8251	301
4.16.2	Block diagram of 8251	301
4.16.3	Pin details of 8251	304
4.16.4	Control words	306
4.16.5	Asynchronous transmission	308
4.16.6	Asynchronous reception	308
4.16.7	Synchronous transmission	309
4.16.8	Synchronous reception	310
4.16.9	Interfacing 8251 With 8086	310
4.17	Memory Interfacing	311
4.17.1	Memory organization in 8086	311
4.17.2	Formation of system Bus	313
4.17.3	Interfacing RAM and EPROM	314
4.18	I/O Interfacing	315
4.18.1	I/O mapped I/O	315
4.18.2	Memory mapped I/O	316

4.18.3	Interfacing an 8 bit input device with 8086	316
4.18.4	Interfacing an 8 bit output device with 8086	318
4.19	Applications of 8086	320
4.19.1	Traffic light control	321
4.19.2	Interfacing LCD display with 8086	324
4.19.3	Interfacing 64 key matrix keyboard with the 8086	330
4.19.4	Interfacing 8 digit 7 segment display with the 8086	331
	Short Question with Answers	335

Chapter 5 8 - Bit Microcontroller - The 8051 - 343 - 399
Architecture

5.1	Introduction	343
5.2	Features of Microcontrollers	343
5.3	Differences between Microprocessor and Microcontroller	344
5.4	Applications of Microcontrollers	344
5.5	Intel 8051 Microcontroller	344
5.6	Comparison Between 8051 and 8031	345
5.7	Features of 8051 Microcontroller	345
5.8	8051 - Architecture	345
5.9	Pins and Signals of 8051	350
5.10	Memory Organization	353
5.11	Special Function Registers (SFR)	356
5.12	I/O Port Operation	357
5.12.1	Structure of port 0	358
5.12.2	Structure of port 1	359
5.12.3	Structure of port 2	359
5.12.4	Structure of port 3	360
5.13	Introduction to 8051 Programming	361
5.14	Addressing Modes	362
5.15	Instruction Set of 8051	363
5.15.1	Data transfer instructions	363
5.15.2	Arithmetic instructions	367
5.15.3	Logical instructions	371
5.15.4	Bit level logical instructions	373
5.15.5	Rotate and swap instructions	375
5.15.6	Branching instructions	377
5.16	Programming the 8051	382
	Short Question with Answers	391

Chapter 6	Interfacing Microcontroller	401 - 471
6.1	External Memory Interfacing	401
6.1.1	Interfacing external program memory	401
6.1.2	Timing diagram for external program memory access	402
6.1.3	Instructions to access external ROM/EPROM	403
6.1.4	Interfacing external data memory	403
6.1.5	Timing diagram for external data memory access	404
6.1.6	Timing diagram for external data memory write operation	405
6.1.7	Instruction to access external RAM	405
6.2	8051 Interrupts	406
6.2.1	Execution of an interrupt	406
6.2.2	Interrupt sources	406
6.2.3	Enabling & disabling interrupts	408
6.2.4	Priority of the interrupts	409
6.2.5	Timing of interrupts	410
6.2.6	Level of the interrupts	410
6.3	Timers and Counters	410
6.3.1	Timer SFRs	411
6.3.2	Modes of operation	413
6.3.3	Timer control and operation	416
6.3.4	Counter operation	417
6.3.5	Programming examples	418
6.4	Serial Communication	418
6.4.1	Serial port control registers	419
6.4.2	Modes of operation	420
6.4.3	Programming the serial port for transmission	422
6.4.4	Programming the serial port for reception	423
6.4.5	Programming examples	424
6.5	Interfacing 8255 with 8051	425
6.6	Interfacing Keyboard	426
6.6.1	Interfacing simple keyboard	426
6.6.2	Interfacing matrix keyboard	427
6.7	Interfacing Displays	431
6.7.1	Interfacing seven segment LED displays	431
6.7.2	Interfacing LCD display	433
6.8	Analog to Digital Converters (ADC)	439
6.8.1	Basic concepts	440
6.8.2	Successive approximation A/D converter	440
6.8.3	ADC 0808 / 0809	441

6.8.4	Interfacing ADC 0808 with 8051	443
6.9	Digital to Analog converter (DAC)	444
6.9.1	Basic concepts	445
6.9.2	Basic conversion techniques	446
6.9.3	DAC 1408	448
6.9.4	Interfacing DAC 1408 with microcontroller	450
6.9.5	Programming applications	451
6.10	DC Motor Interfacing	453
6.10.1	Basic concepts	453
6.10.2	H - Bridge	454
6.10.3	L293	454
6.10.4	Interface of DC motor with 8051	454
6.10.5	Program to run the DC motor	455
6.11	DC Motor Control using PWM	455
6.12	Stepper Motor Control	457
6.12.1	Construction	457
6.12.2	Sequences for rotation	458
6.12.3	Parameters	459
6.12.4	Types of stepper motors	459
6.12.5	Interfacing stepper motor with 8051	460
6.12.6	Software	460
6.12.7	Interfacing sensors	462
6.13	Comparison of Microprocessor, Microcontroller, PIC and ARM Processor	463
6.13.1	Microprocessor and Microcontroller	463
6.13.2	Difference between microprocessor and microcontroller	464
6.13.3	PIC microcontroller	464
6.13.4	Advantages of PIC microcontroller	465
6.13.5	Difference between PIC and 8051 microcontrollers	465
6.13.6	ARM processor	465
6.13.7	Difference between ARM processor and other processors	466
	Short Question with Answers	466

Microprocessors and Microcontrollers

Second Edition

This book gives an introduction to the microprocessors and explains the hardware and software of Intel 8085, 8086 microprocessor, Intel 8051 microcontroller and their associated peripheral devices in detail. This book also covers some of the real time applications of microprocessors and microcontrollers. Software concepts are explained with several programs for the easy understanding by the reader.

C. Latha is a gold medalist from Bharathidasan University, Trichy in B.E.(ECE). She has a teaching experience of nearly 16 years in the field of Electronics and Communication Engineering. Her interests are in the field of Microprocessors, Signal Processing, Electromagnetics and Transmission Lines. She has presented papers in national seminars.

B. Murugeswari is the Head of the Department of Electronics and Communication Engineering in K.Ramakrishnan College of Engineering, Trichy. She has secured the first rank in M.E.(Applied Electronics) from Bannari Amman Institute of Technology, Sathyamangalam. Her areas of interests are Advanced Microprocessor, Digital Signal Processing and Digital Image Processing. She has presented papers in international and national conferences.
